Electromagnetic spectrum - wikipedia The electromagnetic spectrum is the range of frequencies (the spectrum) of electromagnetic radiation and their respective wavelengths and photon energies. Electromagnetic spectrum - wavelength, frequency, and Light radiation visible wavelengths. the electromagnetic spectrum encompasses a continuous range of frequencies or wavelengths of electromagnetic radiation, ranging from long wavelength, low energy radio waves to short wavelength, high frequency, high-energy gamma rays. Light: electromagnetic waves, the electromagnetic spectrum Electromagnetic radiation can be described by its amplitude (brightness), wavelength, frequency, and period. by the equation $e = h \nu$ $e = h \nu$, we have seen how the frequency of a light wave is proportional to its energy. The electromagnetic and visible spectra The longer wavelength, lower frequency regions are located on the far left of the spectrum and the shorter wavelength, higher frequency regions are on the far right. two very narrow regions within the spectrum are the visible light region and the x-ray region. you are undoubtedly familiar with some of the other regions of the electromagnetic spectrum. The electromagnetic (em) spectrum - bbc.com Electromagnetic waves form a spectrum of different wavelengths. this spectrum includes visible light, x-rays and radio waves. electromagnetic radiation can be useful as well as hazardous. Electromagnetic spectrum - hyperphysics concepts Visible light the narrow visible part of the electromagnetic spectrum corresponds to the wavelengths near the maximum of the sun's radiation curve.
