Simple linear and nonlinear models using stata's ml This code fragment page is designed to show how a number of simple linear and nonlinear models can be programmed using stata's ml command. these programs are not 4.1.4.2. nonlinear least squares regression Disadvantages of nonlinear least squares: the major cost of moving to nonlinear least squares regression from simpler modeling techniques like linear least squares is the need to use iterative optimization procedures to compute the parameter estimates. Non-linear least squares - wikipedia Non-linear least squares is the form of least squares analysis used to fit a set of  $m$  observations with a model that is non-linear in  $n$  unknown parameters ( $m > n$ ). it is used in some forms of nonlinear regression. the basis of the method is to approximate the model by a linear one and to refine the parameters by successive iterations.
